(french) TEASER

SYNOPSIS

In the wake of climate change, and because of the ecological need to reduce pesticides, plant selection has to improve. From farmer's seeds to biotechnology, which research will grant everyone good food tomorrow ?

This film is about the relationship between humans and nature, and the way we influence the biodiversity we depend on.

Duration : 81 minutes - DVD and Blu-ray

ASSOCIATION Rés'OGM Info – the producer :

Based in Lyon (France) this association promote a citizen information about GMO (genetically modified organisms) and about alternative models for agriculture, since 2004.

Honorine PERINO, the film director

Biologist, Honorine Perino has worked in rural development in France. It's with the farmers that she discovered the issues of new biotechnologies.

She wants to increase public attention for these issues with her acknowledges and her experience.

The goals of her movies are to create a discuss about major societal debates.

« Seeds of the future » is her 8th movie.

She works with Rés'OGM Info for the third time. She has already made 2 movies with the association : **Cultivons la terre (Let's cultivate the land) in 2008** and **Secrets des champs (Secrets of the fields) in 2012**.

Each movie are created with a complete and pluridisciplinar team of farmers, agronomists and scientists.
